Docker Compose (NGINX + MySQL) with network and volumes

```
~/compose-task> docker-compose ps
    Name                   Command               State                        Ports
-----------------------------------------------------------------------------------------------
mysql_db       docker-entrypoint.sh mysqld      Up      0.0.0.0:3307->3306/tcp,:::3307->3306/tcp,
                                                        33060/tcp
nginx_server   /docker-entrypoint.sh ngin ...   Up      0.0.0.0:8080->80/tcp,:::8080->80/tcp
```

---

create compose for python app + redis

```
eb:latest
Creating redis_db ... done
Creating flask_app ... done
```

```
~/python-redis-app> docker-compose ps

  Name                   Command               State                    Ports
-----------------------------------------------------------------------------------------
flask_app    python app.py                      Up      0.0.0.0:5000->5000/tcp,:::5000->5000/tcp
redis_db     docker-entrypoint.sh redis ...     Up      0.0.0.0:6379->6379/tcp,:::6379->6379/tcp
```

```
~/python-redis-app> curl localhost:5000
Hello World! I have been seen 1 times.
~/python-redis-app> curl localhost:5000
Hello World! I have been seen 2 times.
~/python-redis-app> curl localhost:5000
Hello World! I have been seen 3 times.
~/python-redis-app>
```
